SKILLS

Quality assurance

- Functional & regression testing
- Exploratory testing
- Bug reporting with repro steps
- Automated test scripts, fuzz & stress tests
- Soft-lock & save/load testing
- Jira (learning)

Game design

- F2P economy & progression
- Difficulty balancing with metrics
- Mobile onboarding & tutorials
- Systems & procedural level design

Tools

- Godot 4 (GDScript)
- Android builds
- HTML & PHP basics

Soft skills

- Methodical & detail-oriented
- Clear written communication
- Fast learner, reliable

PEDRO JOSÉ ARANDA

Junior QA Tester · Game Designer

Self-taught game designer who has designed two games in Godot, one of them in closed beta with testers, with a tester's habits: every build goes through automated checks, reproducible bug hunts and data-driven balancing. Industrial maintenance technician by trade, used to diagnosing faults step by step and documenting them clearly. Looking to join a studio's QA team and grow towards game design.

GAME PROJECTS

WARWORKS

2026 · Android · Godot 4 · Closed beta

Idle + factory F2P mobile game — solo designer & director, AI-assisted implementation

- Designed the full game: 71 recipes from 8 raw materials, 5 production branches with 11 licences, 8 Ministry contracts, a multi-factory industrial map with roads, trucks and rail, and a prestige loop across 6 nations.
- Built a whole-game simulation on the real data tables to measure economy and play time; it exposed contracts paying 5× what factories earned and a contract paying worse than the one before. Current measured floor: 12.6 hours.
- Running a closed beta with testers: reproduced and fixed player-reported bugs (removing a door wiped every belt; a tester got 219,450 premium bonds for free), each covered by a test that fails if the bug returns.
- 16 automated checks before every build: 11 test batteries, including a 30,000-action fuzzer, plus 5 synthetic-touch tests on the running game.
- Localised to English, with 900+ texts verified inside the running game.

THE INTEGRATOR

2026 · Android · Godot 4 · In development

Turn-based PvE extraction game — solo designer & director, AI-assisted implementation

- Designed the game: unarmed salvage drones built from 49 parts in 5 slots, 24 rotating action verbs, 16 enemy machines and 2 bosses across 7 procedurally generated zones.
- Balanced by measuring: an enemy dealing 2.00 damage per turn in packs got an extra wind-up, down to 1.33 and two turns of warning; a metrics bot playing whole runs exposed maps with no way out.
- 73 automated tests before every build; a map audit found blocking furniture drawn as floor (32% of an explored floor) and dialogue overflowing its box in 85 measurements.

WORK EXPERIENCE

Industrial Maintenance Technician

Aug 2024 – Present

Alcesa Piping SL

- Diagnose and troubleshoot industrial equipment, isolating faults through systematic testing.
- Follow technical procedures and safety protocols to strict standards.
- Document issues, repairs and results for tracking and process improvement; report findings to supervisors.

Pest Control Technician (Applicator)

Aug 2022 – Aug 2024

Fumigaciones Ibéricas (FISA)

- Carried out systematic inspections and treatments following strict protocols, confirming issues through step-by-step checks.
- Documented findings and actions clearly for full traceability.
